

Austin Powder Expects Boom in Efficiency with the Esker AP Automation Solution

Derby, UK — March 13, 2013 — [Esker](#), a worldwide leader in [document process automation solutions](#) and [SAP](#)® software solution and technology partner, today announced it has been selected by Austin Powder – Argentina, a subsidiary of [Austin Powder](#) of Ohio, USA, and an established provider of blasting products and services, to integrate with the company's SAP application and fully automate [Accounts Payable](#) (AP) processing.

Austin Powder recently developed plans to modernise the vendor invoicing process of its Rafaela, Argentina location with the goal of finding a tool that could create electronic versions of invoices and securely store them. Control and visibility within the current process was low, and, as a growing organisation, Austin Powder wanted to ensure it was equipped to handle larger invoice volumes efficiently, effectively, and without adding more staff.

Shared services centre model

Austin Powder was introduced to Esker early on in its search for a new AP solution. The goal of finding a one-dimensional repository tool quickly changed after realising it could utilise Esker to transform its Rafaela location into a shared services centre model with AP automation capabilities such as [OCR](#). “We have remote offices throughout the country that also receive payables, so Esker’s ability to centralise validation and the entire process really excites us,” said Pablo Manfredi, CFO of Austin Powder – Argentina. “We see it as a great opportunity to unify our remote offices and shore up the business model moving forward.”

The ability of the Esker solution to co-exist with the company’s newly implemented SAP system was also a driving factor in the process. [Crystalis Consulting](#), a global information technology and services provider, and Esker partner, played a key role in the final decision. “Knowing that Crystalis is one of the leading SAP partners out there, Esker’s strong business relationship with them is a huge plus in our eyes,” said Manfredi. “We know we are dealing with a highly reputable company, and that gives us a lot of confidence.”

High expectations

Understanding the challenges it faces as a growing company in an uncertain economic climate, Austin Powder is optimistic about the opportunities the Esker solution will present. The benefits of automated AP processing for shared services centres include: electronic workflow for a more efficient, streamlined process; real-time tracking and reporting capabilities; country code management; cross border support; and the ability to leverage automation across multiple business processes if desired.

(continued)

“More and more multi-location companies are using the shared services centre model in order to more effectively manage AP functions, and we’re excited to play a large role in that development,” said Steve Smith, Chief Operating Officer at Esker. “Not only does our solution allow Austin Powder – Argentina to address their immediate needs (adding control and visibility to their purchase-to-pay process, improving SLAs to their internal clients, etc.), the centralised model puts them in prime position for handling business growth in the coming years. Maintaining a competitive edge is imperative, and this is becoming a go-to solution for achieving that.”

About Austin Powder

Based out of Cleveland, Ohio, with subsidiaries worldwide, Austin Powder was founded in 1833 as a manufacturer of black powder used to blast rocks, mine coal and create canals. Today, Austin Powder’s commercial explosives are primarily used for construction, mining, quarrying and seismic exploration, with products that include: detonating cord, detonator-sensitive emulsions, cast boosters, high-explosive emulsions, and electric/ non-electric detonators. Austin International, through joint ventures and partnerships, provides explosives for projects outside the U.S., with principal divisions that include Austin International, Austin Detonator and Austin Star Detonator.
